EDUCATION

University of Wisconsin - Green Bay | B.S. Computer Science, AI Emphasis | GPA: 3.83/4.00

Expected May 2027

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, SQL, Dart, HTML, CSS
- **Frameworks & Libraries:** React, Flask, Node.js, Flutter, Angular, Tailwind CSS, Pandas, Scikit-Learn
- **Tools & Concepts:** PostgreSQL, Firebase, BigQuery, Docker, Git, GitHub, GCP, Jira, RESTful APIs, OOP, DSA, Agile/Scrum

EXPERIENCE

Faith Technologies Incorporated (FTI) | Data Engineering Intern

June 2026 – Aug. 2026

- Migrated an AI SafetyBot from Jupyter Notebook to a full-stack React/Flask application, developing backend APIs, integrating BigQuery through a GCP service account, and building interactive Plotly dashboards; enabled local execution to eliminate the immediate need for cloud hosting and simplify application maintenance.
- Engineered BigQuery Bronze-to-Silver SQL transformations and a 3-step validation framework to detect duplicate keys, data loss, and orphaned records; applied window functions, safe type casting, and SCD flags to improve data reliability and prevent reporting errors.
- Developed K-Means clustering models using Python, Pandas, and Scikit-Learn to group builds for parametric estimation, while analyzing margin profitability and labor utilization to identify cost drivers and support pricing, capacity planning, and operational decisions.

Alive & Kickin' Pizza Crust | IT Intern

Jan. 2025 – Aug. 2025

- Redesigned vendor-facing web portals using React, Python/Flask, and Plotly, integrating real-time inventory data to improve supply chain visibility by 25% and reduce manual data entry errors for bulk ingredient management.
- Developed Python automation scripts and AI agents for IT Help Desk workflows, implementing email parsing, automated ticket logging, and intelligent response generation to reduce manual workload by 40% and accelerate employee support.
- Troubleshoot and maintained IT systems across multiple locations, resolving application and infrastructure issues to improve system reliability, minimize operational disruptions, and support uninterrupted business workflows.

PROJECTS

XChange – AI-Powered Social Finance Platform | React, WebSockets, Grok API, X API 🐙

- Engineered a real-time social finance platform using React and WebSockets, integrating Grok AI and X APIs to process live market discussions and deliver sentiment insights through a responsive frontend; won the HackPrinceton X/Twitter Track.
- Developed a paper-trading backend with portfolio tracking, order execution logic, and secure data storage, enabling users to simulate trades, manage positions, and access market insights through reliable API communication.

PLC Monitoring System | Python, Flask, HTML, CSS, JavaScript

- Built and deployed a Flask web application integrating ControlLogix and SLC500 PLCs through pylogix/pycomm3, enabling real-time industrial data collection and monitoring with 99.9% accuracy.
- Engineered a multi-threaded Python backend and interactive visualization interface to process equipment data concurrently, reducing downtime analysis time by 40% and enabling plant operators to diagnose issues and make faster maintenance decisions.

Connect Well Nepal | Flutter, Dart, Firebase, Material Design 🐙

- Built a cross-platform telehealth application for Android and Web using Flutter and Firebase, implementing secure authentication, user profiles, and appointment booking interfaces to connect patients with healthcare providers.
- Architected a scalable, component-based application with reusable Material Design UI and Firebase integration, establishing the foundation for real-time patient-provider communication and future video, voice, and chat consultations.

LEADERSHIP

Uunchai Summer Cohort 2026 | Project Mentor

June 2026 – Aug. 2026

- Mentored six high school students through a 6-week Scrum-based development program, using Jira to manage sprints, track tasks, and guide the development of a Progressive Web Application connecting Nepalese farmers directly with retailers.
- Designed a Node.js and PostgreSQL backend with offline data synchronization using IndexedDB and secure eSewa payment integration, helping the team deliver a functional marketplace prototype for agricultural supply chain challenges.

Google Developer Groups on Campus – UWGB | Founder & President

Nov. 2025 – Present

- Founded UWGB's first Google Developer Groups chapter, leading a technical community that organizes hands-on workshops in software development, AI, and cloud technologies to help students build practical engineering skills.
- Led the organization of HackGB, UW-Green Bay's first collegiate hackathon, coordinating technical workshops, industry mentors, and engineering resources to help students build and showcase real-world software projects.

AWARDS

- **Sherry Anklam Memorial Award (2026):** Received NEW AITP grant for academic excellence and leadership.
- **Carl E. Krog Memorial Scholarship (2026–2027):** Awarded for academic excellence and outstanding coursework.
- **Foundations Health & Wholeness Scholarship (2026–2027):** Selected in recognition of academic accomplishments.
